

1)

The DeFi Network

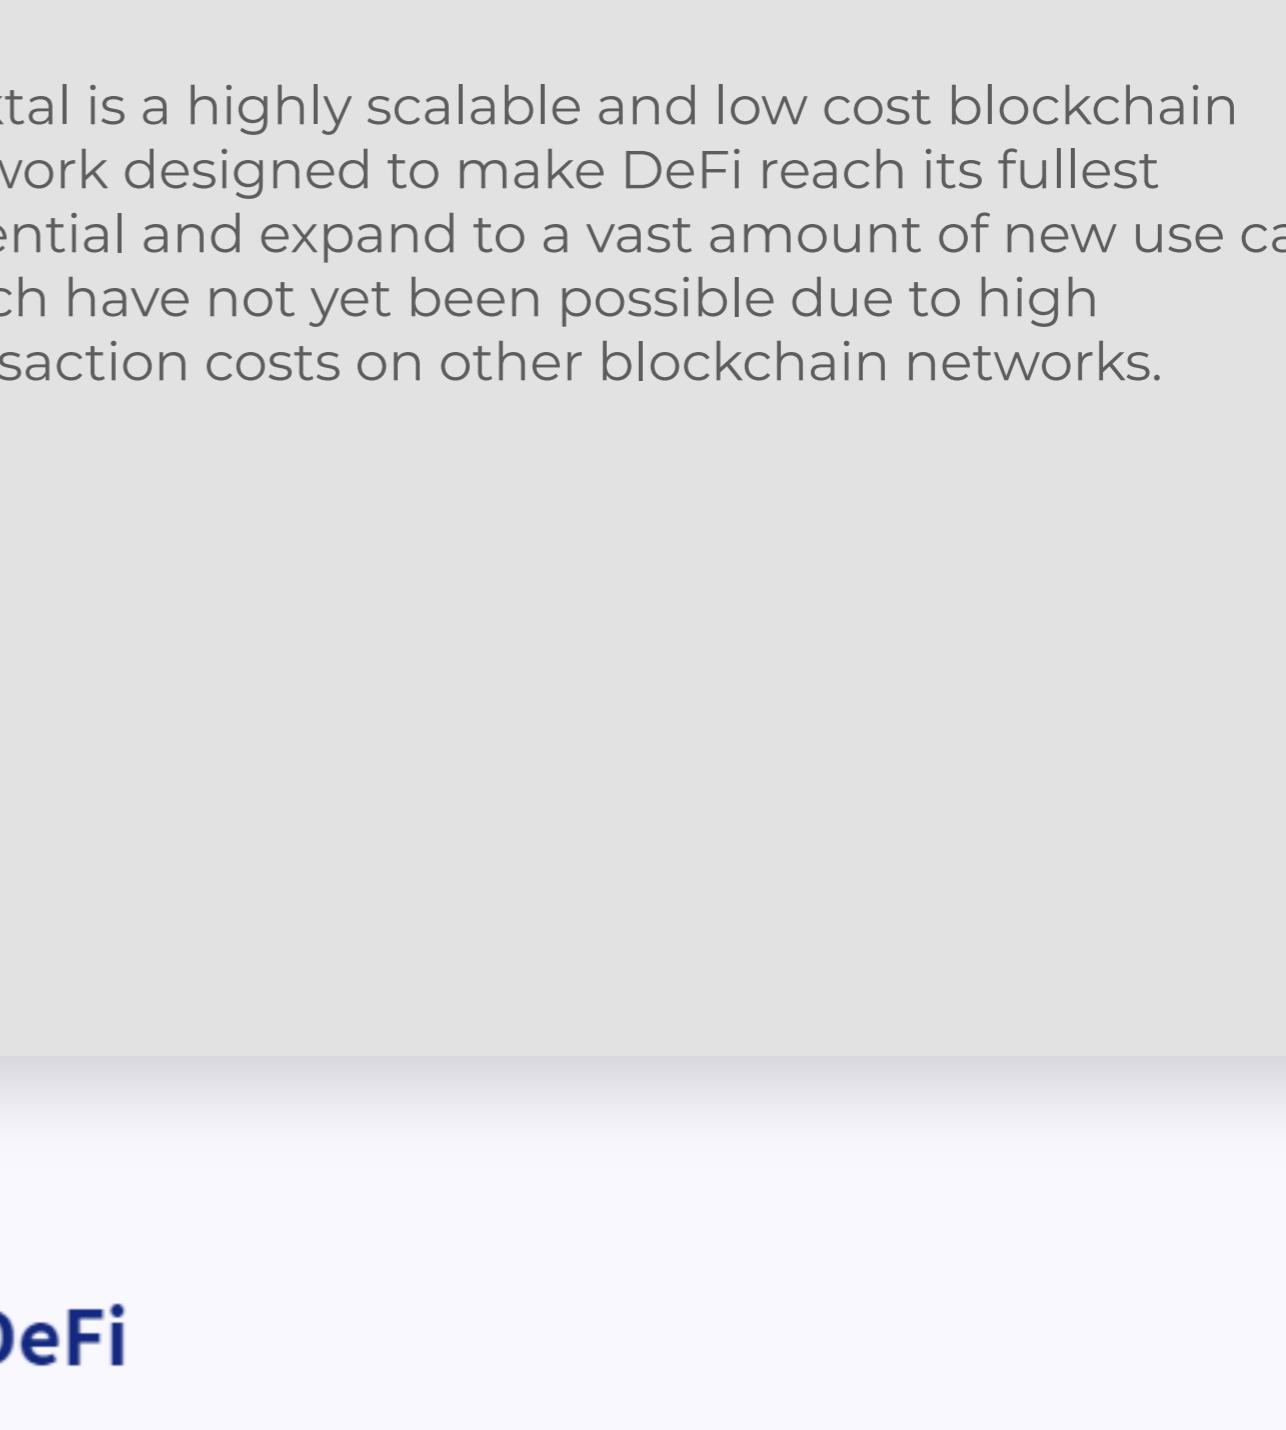

Create incredibly powerful DeFi applications without any limitations.

[GET STARTED](#)[LEARN MORE](#)

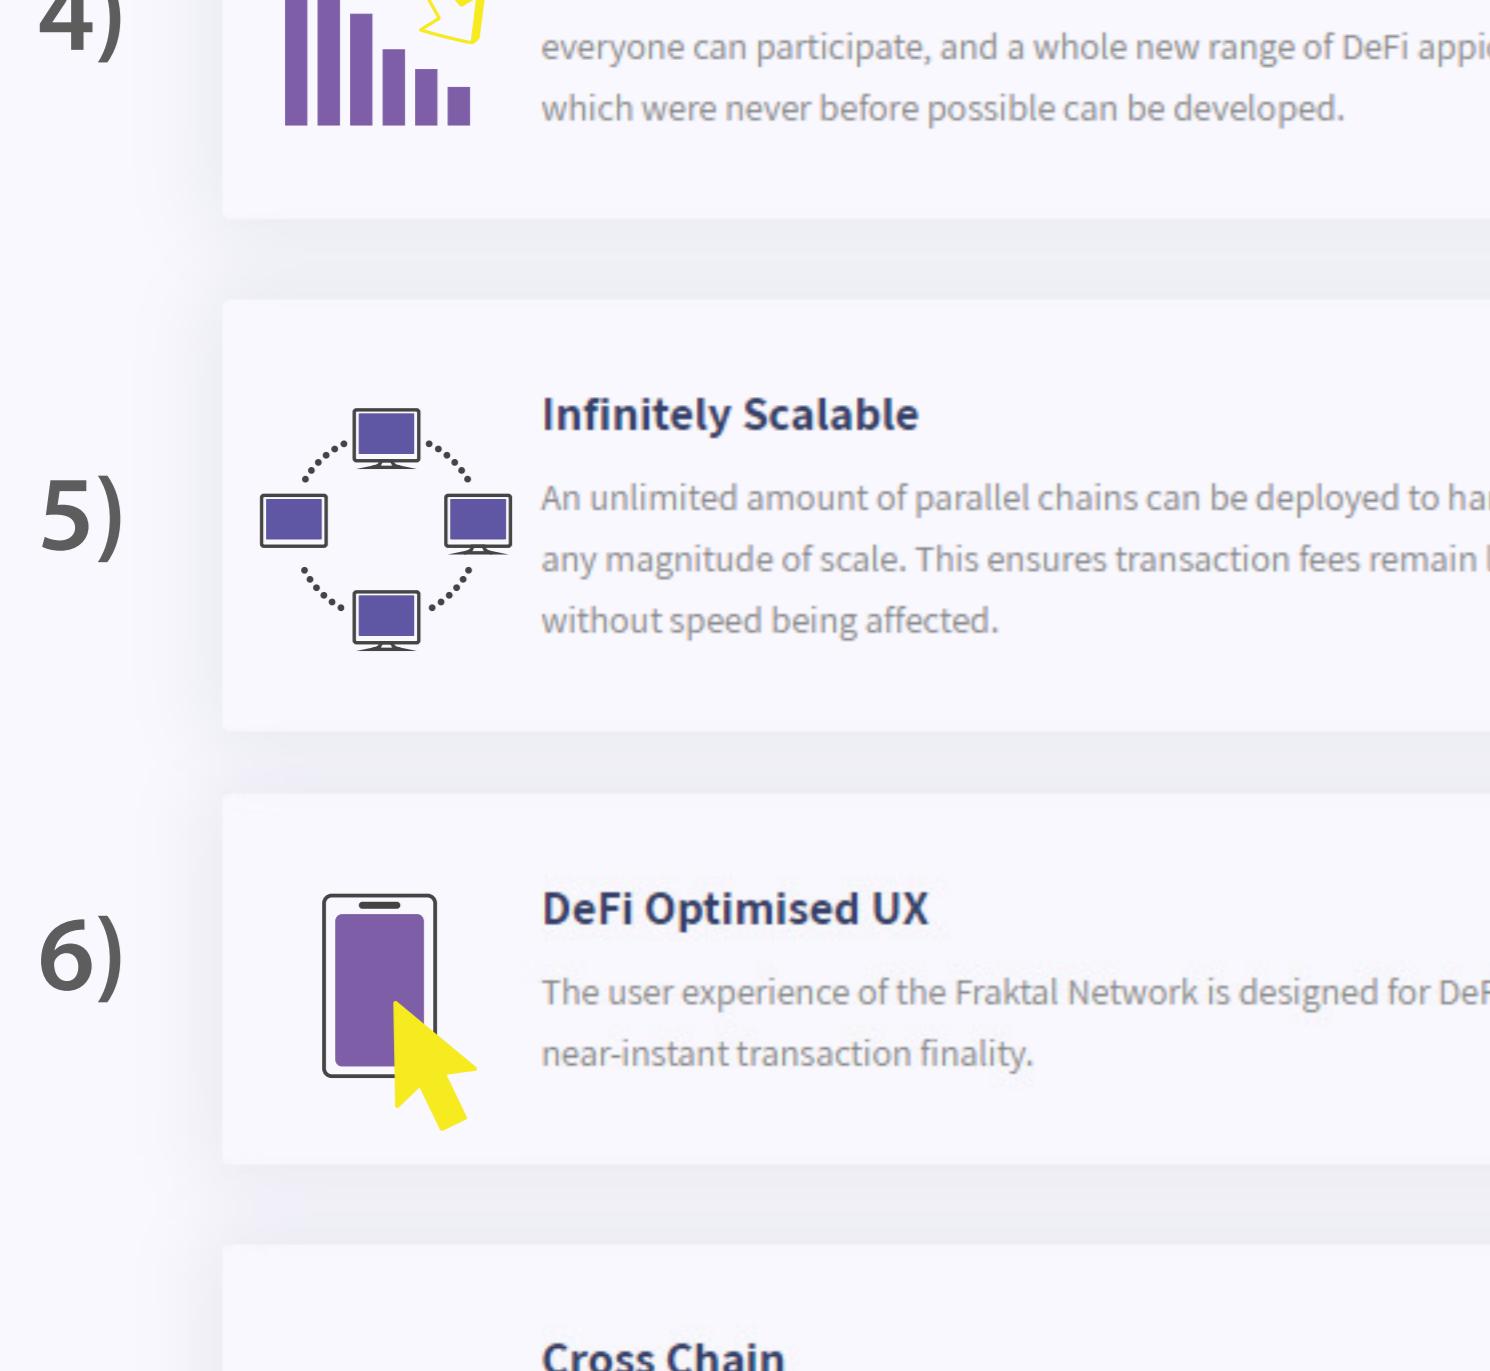

What is DeFi?

DeFi (Decentralised Financial) apps give users full control over their assets, enabling investors to vastly increase their profits by no longer having to pay fees to banks, brokers, or other financial service providers.

2)

3)

What is Fraktal?

Fraktal is a highly scalable and low cost blockchain network designed to make DeFi reach its fullest potential and expand to a vast amount of new use cases which have not yet been possible due to high transaction costs on other blockchain networks.

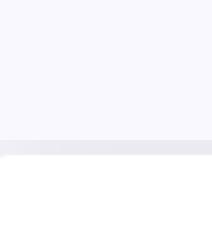

4)

Low Fees

Low transaction fees create an inclusive environment where everyone can participate, and a whole new range of DeFi applications which were never before possible can be developed.

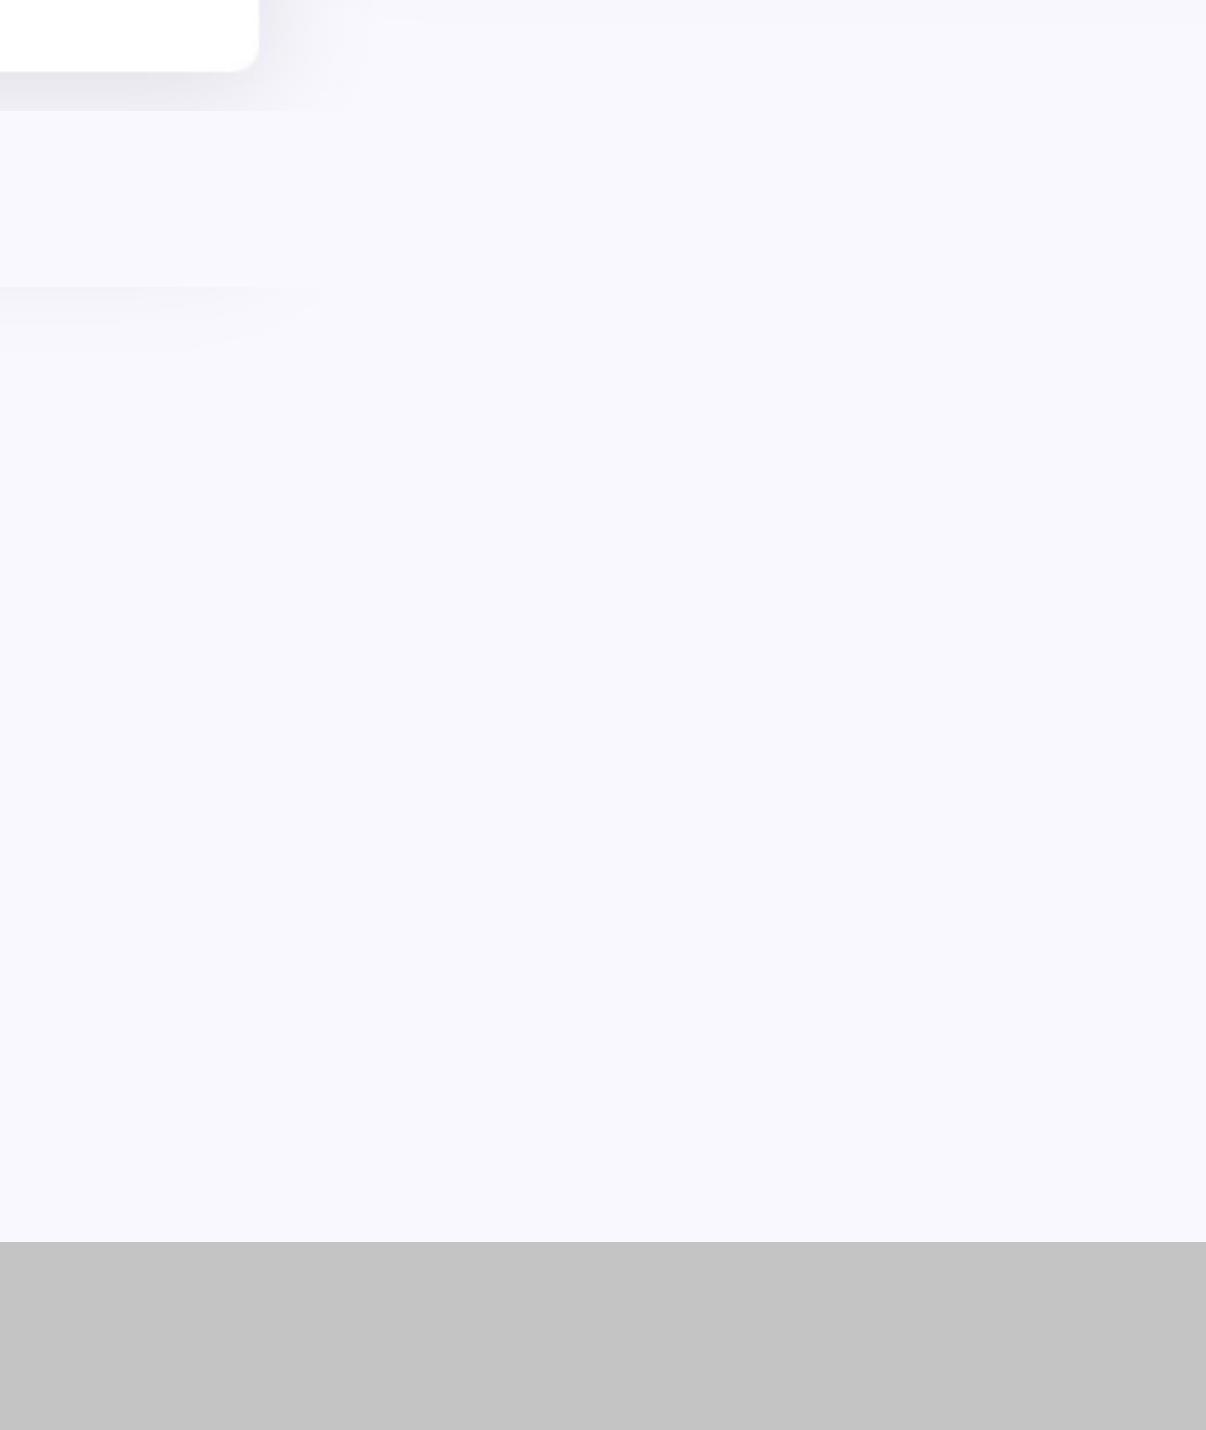

5)

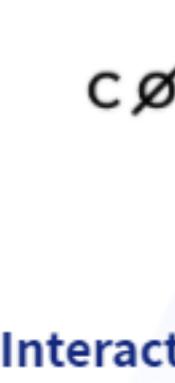

Infinitely Scalable

An unlimited amount of parallel chains can be deployed to handle any magnitude of scale. This ensures transaction fees remain low without speed being affected.

9)

6)

DeFi Optimised UX

The user experience of the Fraktal Network is designed for DeFi with near-instant transaction finality.

7)

Cross Chain

Tap into billions upon billions of dollars of untapped liquidity across different Blockchains and simply transfer tokens and data across networks.

8)

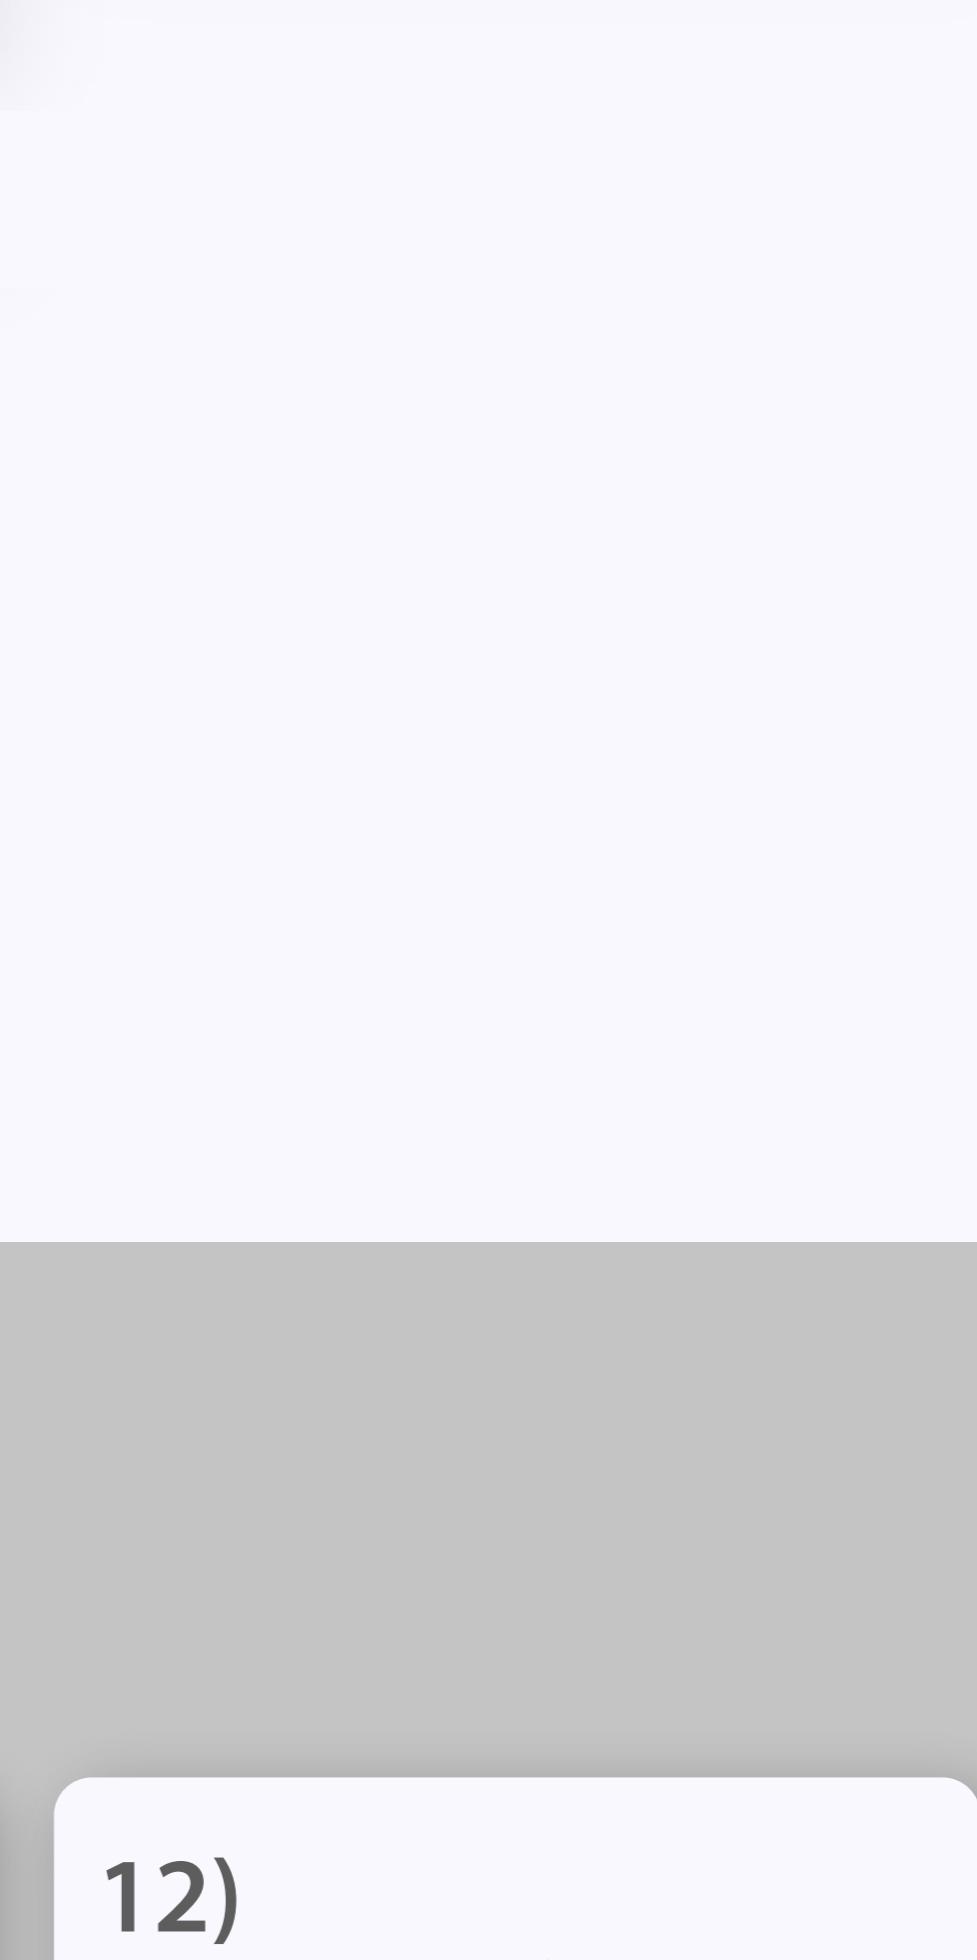

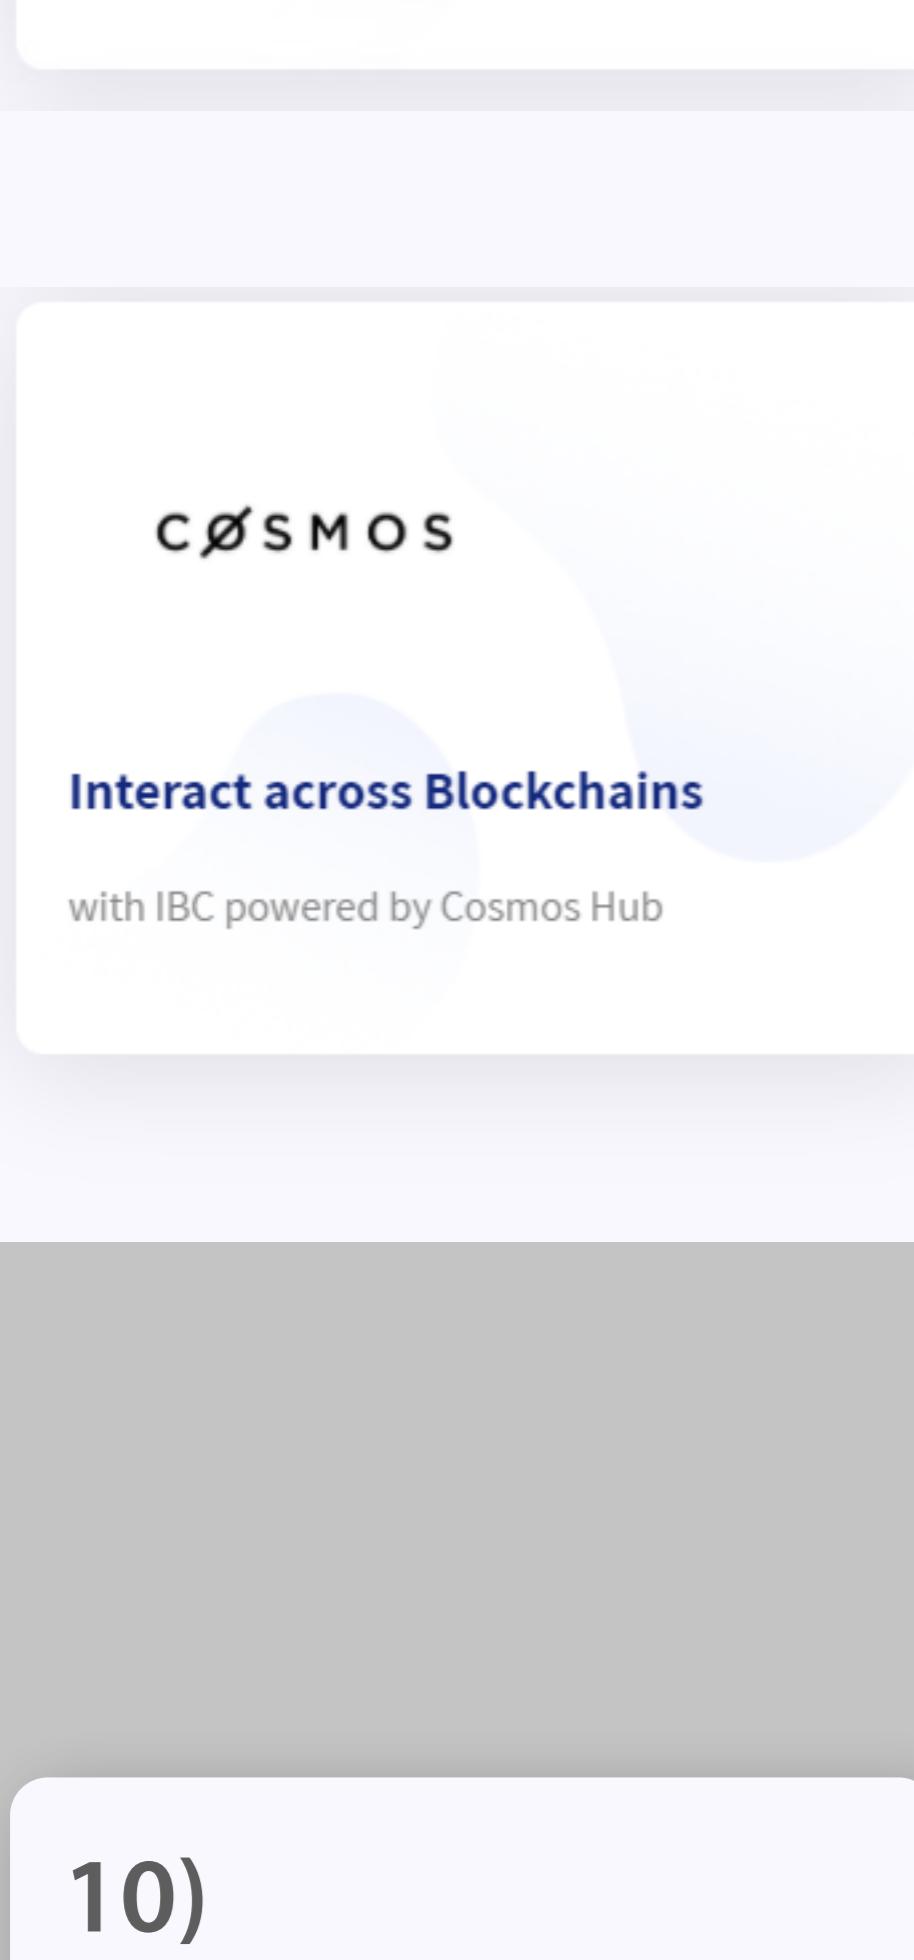

Developer Friendly

Migrate Ethereum dApps in minutes. No learning curve. Apps are built in solidity and have all the Ethereum Developer Tools.

Who We Work With

Fraktal Directly integrates with all other Cosmos Ecosystem projects by default, giving

Fraktal powered DeFi apps unlimited potential to disrupt the financial world.

COSMOS

Interact across Blockchains

with IBC powered by Cosmos Hub

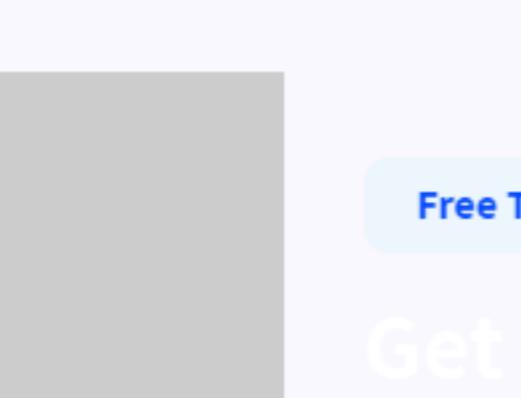

Get started

10)

Earn FRAK
Join the Fraktal Community and receive tokens for contributing to the growth and development of the Fraktal Ecosystem.

11)

Stake FRAK
Participate in securing the Fraktal Network and Governance. In return receive staking rewards in real time.

12)

Build Something
Tap into the power of Tendermint and robustness of CosmosSDK without having to manage your own Blockchain.

13)

The Fraktal Vision

At Fraktal we are working towards a future where everyone has an equal opportunity to succeed. To create a world that operates in an open and transparent fashion where everyone is included.

14)

Achieving our Mission

We achieve our mission by creating an environment where everyone who is passionate about enacting change can effectively work together to produce cutting edge technology and deliver it to those who can benefit from it the most.

Fraktal Network Token - FRAK

FRAK is the economic layer which powers the Fraktal Network. It has 3 primary functions.

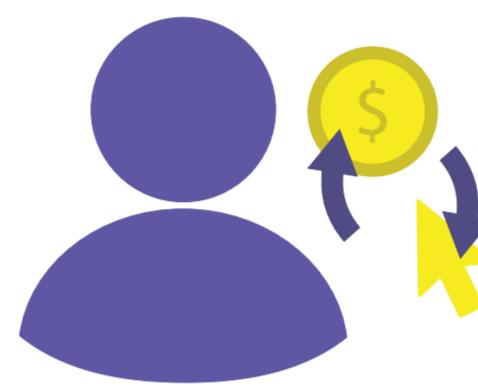

15)

Staking

The number of tokens deposited with each validator determines staking weight which influences decision making power and rewards.

16)

Governance

Each token equates to 1 vote on network proposals and other governance decisions which impact the Fraktal Ecosystem.

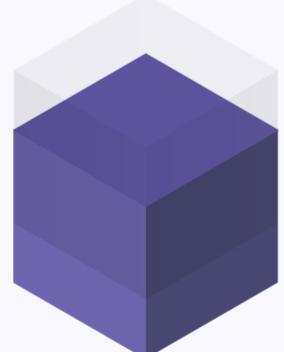

17)

Network Fees

To deploy contracts and transact on the Fraktal Network fees are required which are paid out to the staking validators.

18)

Earn FRAK by Contributing

Complete tasks to develop and grow the Fraktal Ecosystem and be rewarded in FRAK. You do not have to be a developer, there are opportunities for everyone!

[EXPLORE TASKS](#)

19)

What is Staking?

Staking is how the Fraktal Community secures and governs the Fraktal Network, without relying on a centralised authority.

20)

To participate in staking a person or company needs to become a validator.

To become a validator you must run a full node which is a real-time copy of all the historical and current transactions on Fraktal Network and have a balance of deposited FRAK which is in the top 100.

21)

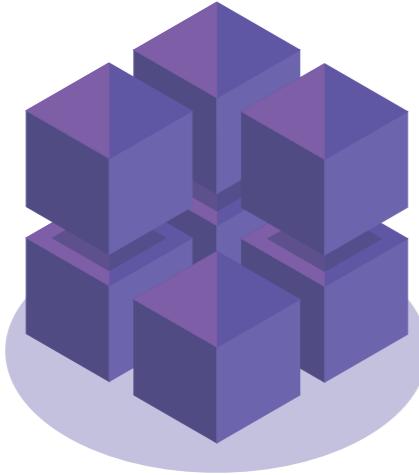

Stake without becoming a Validator

If you do not want to run your own full node and be a validator, you can delegate your tokens to a validator. This process is fully secure and you will always remain in full control of your tokens. Validators take a small share of your rewards in exchange for running a full node.

Rewards are paid out in real time 24/7 and typically range between 7% to 12% annually.

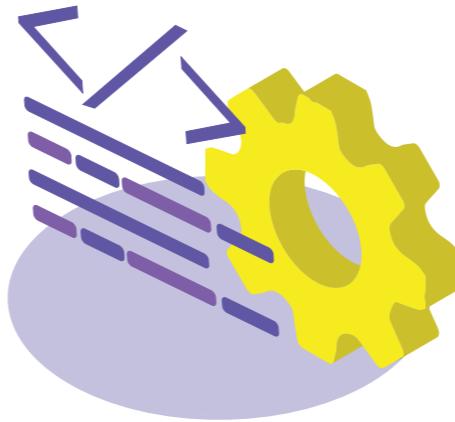

22)

Fraktal Network

An open financial system that enables anyone to build financial apps without relying on banking infrastructure.

23)

Fraktal Testnet

Fraktal TestNetwork for Developers, learning, and trying new things.

24)

FrakIt

Tokenise any asset, fundraise, and automatically distribute revenue in real-time. Transparent, inclusive, and equal.

25)

Gabel

Your own personal bank. Safely store your assets and send money instantly, anywhere in the world without bank fees.

26)

Fraktal is an open source community

This means that no single company or person owns Fraktal. Both individuals and companies unite to bring the Fraktal mission to life and make the world a more equal and inclusive place.
